

Traffic and access

Component and material deliveries are a key phase in the construction of any solar project.

Currently our proposed construction route for the development at Fallaws Farm in Arbirlot would be via the A92 to minimise construction traffic impact on Arbroath.

Construction traffic would access the site off the A92 at the Salmond's Muir junction leading onto Bonnyton Road to the site.

The preliminary plan below shows our current preferred proposed delivery route, and access point, currently under consideration which could be used for the delivery of materials and access for construction and maintenance.

We will consult with the relevant Highways authorities, community councils, the emergency services, the local community

and other relevant bodies to produce a Construction Traffic Management Plan (CTMP) to support any future planning application. The CTMP would outline the overall framework for managing the safe movement of construction and delivery traffic as well as itemising the expected number of traffic movements and timing restrictions.

The traffic movements will be limited to avoid morning and evening peak times, where possible. There will also be a dedicated Community Liaison Officer to engage with local residents throughout the construction and operational phases, if the solar farm is consented.

Preferred construction route based on current proposals
